MycoKeys 52: 89–102. <https://doi.org/10.3897/mycokeys.52.31415>. MycoKeys 58: 129–129. <https://doi.org/10.3897/mycokeys.58.38856>

Two morphological features of the new *Psathyrella* species, described in the paper, need to be emended: the presence of pleurocystidia and the spore length range.

Figure 3 (G, H and I) showed pyriform cells on the cap cuticle, not pleurocystidia. This mistake originated from a wrong labelling of the photo folder. Conversely to what is stated in Table 1 and on pages 93 and 100, pleurocystidia were not observed. Coherently with the DNA analysis, this correction addresses the discussion on page 99 to the certain inclusion of our fungus in the Section *Spintrigerae* (Fr.) Konr. & Maubl. and in the “*candolleana*” clade.

Due to a transcription error, the spore length range was 7.2–8.8 µm instead of 7.2–11.8 µm.
